## INTRODUCTION

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in class order the descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

All class descriptions and office rulings are now kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. It has therefore been possible to print this volume from copy prepared by listing these punch cards. This has imposed certain important limitations on the phrasing, punctuation and format which could be used in the volume. The most important limitation is that of length; all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line, a second line of not more than 30 characters was added. In these cases the class code and unit of quantity are listed on the first line rather than the second, and the first line is completed with leader dots. A careless user could easily miss the important second descriptive line which is identified by a 1-letter indentation and by the absence of leader dots, a quantity and a code.

This volume is divided into two sections. The first section or "preamble" is brief (1 page) and contains a few items which provide:

- (a) general guides to the classification of broad categories of goods  
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume  
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity  
(e.g.: IGEPON IS A GENERAL TRADE NAME ....)

The items in the preamble do not show a class code; they are therefore arranged in alphabetic order.

The main part of this volume contains the import class descriptions and specific commodity rulings arranged in class (numeric) order, and by alphabetic order within each class. The first item shown for any class is the class description used in monthly and quarterly trade reports, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and never have a second line. They are further identified by a lozenge sign ◊ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description (occasionally supplemented by a second descriptive line of up to 30 characters) a unit of quantity (or a dollar sign if goods which would be classified according to a specific ruling are recorded without a quantity), and a class code. Any unused portion of the first line of the description is completed with leader dots linking the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Users of this volume will notice that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dollar sign in the quantity column. This can occur whenever a class takes both complete units and parts of units; rulings on complete units will specify a quantity (commonly "number"), while "parts" rulings will show a dollar sign because parts are recorded without quantities.

As mentioned earlier, this volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. Because several persons worked on this volume, and because the opportunities for final editing were limited, there is no complete list of abbreviations used, and more than one abbreviation may be used for the same word or phrase. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL) ... bleached	KNIT) ... knitted
BLEACHD) ...	KNTD) ...
COT ... cotton	WOV ... woven or broad woven
FAB ... fabrics	WOV NAR ... narrow woven

(3) Miscellaneous:

ELEC ... electric(al)	MAT ... materials
EXC ... except	PLAST ... plastic
INCL ... including	PROD ... products
IND ... industry	PT) ... parts
INDUST ... industrial	PTS) ...
MACH ... machine(s)	SYN ... synthetic
MACHY) ... machinery	T.I. ... tariff item
MCHY) ...	

Users of this volume must understand that it does not and never will provide a complete list of the contents of each import commodity class. The purpose of Volume II is rather to group together and under one class description the main commodities falling within each commodity class, and it must be read in the context of the full class descriptions and notes contained in "Import Commodity Classification Volume I, The Classification." It would be appreciated if users of this volume would bring to our attention any apparent conflicts between its contents and the material in Volume I.

All class descriptions and specific commodity rulings which appear in this volume are also contained in "Import Commodity Classification, Volume III, Alphabetic Index". In that volume they are arranged in alphabetic order. Those who wish to locate the proper import commodity class for any specific description should refer to Volume III.

Including Revision Service

## INTRODUCTION

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in class order the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a complete list of the contents of each import commodity class. Such a list would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not designed to help users find the class in which particular commodities are included; that purpose is better served by Volume III of the Import Commodity Classification (DBS Cat. No. 12-526) which presents the same material arranged in alphabetic order.

All office rulings are now kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed from copy prepared by listing these punch cards, which has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4-letter indentation.

This volume is divided into two sections. The first section or "preamble" is brief (1 page) and contains a few items which provide:

- (a) general guides to the classification of broad categories of goods  
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume  
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity  
(e.g.: IGEPON IS A GENERAL TRADE NAME ....)

The items in the preamble do not show a class code; they are therefore arranged in alphabetic order.

The balance of this volume presents the import class descriptions and specific commodity rulings arranged in class (numeric) order, and by alphabetic order within each class. The first item shown for any class is the class description used in monthly and quarterly trade reports, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol □ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description, occasionally supplemented by a second descriptive line of up to 31 characters, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Users of this volume will notice that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This can occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL)			KNIT)		
BLEACHD)	...	bleached	KNTD)	...	knitted
COT	...	cotton	WOV	...	woven
FAB	...	fabrics			broad woven
			WOV NAR	...	narrow woven

(3) Miscellaneous:

ELEC	...	electric	MAT	...	materials
		electrical	PLAST	...	plastic
EXC	...	except	PROD	...	products
INCL	...	including	PT)	...	parts
IND	...	industry	PTS)	...	
INDUST	...	industrial	SYN	...	synthetic
MACH	...	machine(s)	T.I.	...	tariff item
MACHY)					
MCHY)	...	machinery			

Units of Quantity: In preparing the import commodity classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

Throughout the import commodity classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

Bbl. ....	Volume in barrels (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
Broad woven ...	More than 12 inches in width.
Bu. ....	Volume in bushels, for barley, 48 lb. for oats, 34 lb. for buckwheat, 48 lb. for rye, 56 lb. for Indian corn (maize), 56 lb. for wheat, 60 lb.
Canned .....	Preserved solely by being shut off from air.
Carat .....	Weight in carats.
Cord .....	Volume in cords.
Cwt. ....	Weight in hundredweights of 100 lb. each.
Cwt. N. ....	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz. ....	Number of dozens.
Doz. Pr.) Dz. Pr. ) ....	Number of pairs in dozens.
Ft. ....	Length in linear feet.
Gal. ....	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross .....	Number in gross.
Hardwood .....	Wood from broad-leaved trees.
Kg. ....	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb. ....	Weight in pounds.
Lb. N. ....	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M. ....	Number in thousands.
M. B. Ft.) M. B. F. ) ....	Volume in thousand board feet.
M. Cu. Ft.) M. C. F. ) ...	Volume in thousand cubic feet.
M. Kw. H. ....	Thousand kilowatt hours.

Narrow woven ...	Not more than 12 inches in width.
N. E. S. ....	Not elsewhere specified.
No. ....	Number.
Oz. ....	Weight in ounces.
Pack ....	Number of packs.
Pair ....	Number of pairs.
P. Gal. ....	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg. ....	Number of packages.
Softwood ....	Wood from coniferous trees.
Sq. Ft. ....	Area in square feet.
Sq. Ft. ¼" equiv.) ) ..... SF1/4    )	Volume in square feet of ¼" thickness, other thicknesses to be converted to the equivalent of ¼" thickness (e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of ¼" equivalent).
Sq. Yd. ....	Area in square yards.
Ton ....	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz. ....	Weight in troy ounces.
- ....	In Unit of Quantity Column: no quantity recorded.
* ....	Preceding ruling: ruling new or revised as of date appearing at top of page.
□ ....	Precedes each class description card to distinguish class descriptions from rulings.

## INTRODUCTION

This is the third complete edition of Volume II of the Import Commodity Classification which was introduced in 1964.

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in numeric order the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a complete list of the contents of each import commodity class. Such a list would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not designed to help users find the class in which particular commodities are included; that purpose is better served by Volume III of the Import Commodity Classification (DBS Cat. No. 12-526) which presents the same material arranged in alphabetic order.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed from copy prepared by listing these punch cards, which has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4-letter indentation.

This volume is divided into two sections. The first section or "preamble" is brief ( 9 pages) and has two parts:

The first part contains items which provide:

- (a) general guides to the classification of broad categories of goods  
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume  
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity  
(e.g.: IGEPON IS A GENERAL TRADE NAME ....)

These items do not show a commodity code, and are arranged in alphabetic order.

The second part contains also in alphabetic order those group descriptions which are included in Volume III, the Alphabetic Index, in order to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They show the group code, and may contain a unit of quantity (where all classes in the group have the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Leader dots link the description and its unit of quantity.

The balance of this volume presents the import class descriptions and specific commodity rulings arranged in numeric order, and by alphabetic order within each class. The first item shown for any class is the class description, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol □ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description, occasionally supplemented by a second descriptive line of up to 31 characters, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

## (2) To describe textile fibres, textiles and textile products:

BL)	... bleached	KNIT)	... knitted
BLEACHD)		KNTD)	
COT	... cotton	WOV	... woven
FAB	... fabrics		broad woven
		WOV NAR	... narrow woven

## (3) Miscellaneous:

ELEC	... electric	MAT	... materials
	electrical	PLAST	... plastic
EXC	... except	PROD	... products
INCL	... including	PT)	... parts
IND	... industry	PTS)	
INDUST	... industrial	SYN	... synthetic
MACH	... machine(s)	T.I.	... tariff item
MACHY)			
MCHY)	... machinery		

Units of Quantity: In preparing the import commodity classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

Throughout the import commodity classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

Bbl. ....	Volume in barrels, for petroleum, 35 Canadian gallons or 42 U.S. gallons.
Broad woven ...	More than 12 inches in width.
Bu. ....	Volume in bushels, for barley, 48 lb. for oats, 34 lb. for buckwheat, 48 lb. for rye, 56 lb. for Indian corn (maize), 56 lb. for wheat, 60 lb.
Canned .....	Preserved solely by being shut off from air.
Carat .....	Weight in carats.
Cord .....	Volume in cords.
Cwt. ....	Weight in hundredweights of 100 lb. each.
Cwt. N. ....	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz. ....	Number of dozens.
Doz. Pr.) Dz. Pr. ) ....	Number of pairs in dozens.
Ft. ....	Length in linear feet.
Gal. ....	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross .....	Number in gross.
Hardwood .....	Wood from broad-leaved trees.
Kg. ....	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb. ....	Weight in pounds.
Lb. N. ....	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M. ....	Number in thousands.
M. B. Ft.) M. B. F. ) ....	Volume in thousand board feet.
M. Cu. Ft.) M. C. F. ) ...	Volume in thousand cubic feet.
M. Kw. H. ....	Thousand kilowatt hours.

Narrow woven ...	Not more than 12 inches in width.
N. E. S. ....	Not elsewhere specified.
No. ....	Number.
Oz. ....	Weight in ounces.
Pack ....	Number of packs.
Pair ....	Number of pairs.
P. Gal. ....	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg. ....	Number of packages.
Softwood ....	Wood from coniferous trees.
Sq. Ft. ....	Area in square feet.
Sq. Ft. 1/4" equiv.) ) ..... SF1/4     )	Volume in square feet of 1/4" thickness, other thicknesses to be converted to the equivalent of 1/4" thickness (e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of 1/4" equivalent).
Sq. Yd. ....	Area in square yards.
Ton ....	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz. ....	Weight in troy ounces.
- ....	In Unit of Quantity Column: no quantity recorded.
* ....	Preceding ruling: ruling new or revised as of date appearing at top of page.
□ ....	Precedes each class description card to distinguish class descriptions from rulings.
